

Shanu Sivakumar

Full Stack Engineer

hello@shanu.dev | Chennai, India | shanu.dev | [github/shanuflash](https://github.com/shanuflash) | linkedin.com/in/shanuflash

Summary

Specializing in enterprise SaaS architecture, scalable full-stack applications, and modern product experiences, with expertise in monetization infrastructure, workflow-driven UX engineering, and scalable platform systems.

Skills

Languages

TypeScript, JavaScript, HTML, CSS, Sass

Frameworks & Libraries

Next.js, React, Tailwind CSS, Tanstack Query, Drizzle ORM, Redux Toolkit, Radix UI, Better Auth

Tools

Git, Figma, Claude Code, Vercel, Jira, Docker, pnpm

Databases & Services

PostgreSQL, SQLite, AWS S3, Turso, Cloudinary, Supabase, MongoDB, Ably

Experience

SurveySparrow

Chennai, India

Full Stack Developer

Aug 2023 - Present

- Platform Architecture & Mobile Experience Modernization:** Led the rebuild of SurveySparrow’s legacy Mobile Web platform in under 3 months, delivering dynamic onboarding, drag-and-drop survey configuration, theming systems, and scalable UX architecture. Modernized frontend infrastructure by migrating Redux/Axios patterns to TanStack Query for server-state caching and synchronization at scale.
- Ticketing Platform Revamp & Workflow Automation:** Rebuilt the Ticket Management platform from the ground up, introducing parent-child ticketing workflows, advanced filtering and saved custom views, Lexical-based rich text editing, macros, quick replies, keyboard-accessible workflows, and round-robin assignment systems optimized for speed and operational efficiency.
- PLG & Monetization Infrastructure:** Architected full-stack monetization and upgrade systems including dynamic pricing and upgrade experiences, contextual paywalls, usage-based alerts, quota-aware conversion flows, enterprise feature gating, and 7-day trial systems with backend cooldown enforcement across multiple product categories. Built a super-admin driven seasonal sales platform with Stripe-integrated coupon management, HubSpot account exclusions, and Redis-backed dynamic configuration and caching.
- Enterprise Security & Platform Infrastructure:** Redesigned authentication and enterprise platform infrastructure by expanding 2FA support across Email, SMS OTP, and TOTP flows, implementing role-based and customizable navigation architecture with DB/Redis persistence, and provisioning isolated sandbox environments for enterprise testing and controlled feature access.
- Reusable Systems & Product Experience Engineering:** Built reusable platform systems including a multi-format attachment viewer supporting documents, media, and rich previews directly within the product. Unified fragmented branding and configuration logic into centralized platform-level systems while delivering interactive onboarding experiences and guided user adoption flows across key product surfaces.

Projects

NextLevel

Next.js, Turso, Drizzle ORM, Better Auth

Engineered a full-stack data pipeline integrating IGDB with a Turso/Drizzle layer; implemented intelligent server-side caching and background cron jobs to synchronize global metadata while optimizing API consumption.

<https://nextlevel.shanu.dev>

Whispr

Next.js, Ably Chat SDK, Tailwind CSS

Developed a real-time anonymous chat platform using Ably SDK for messaging and presence tracking; implemented secure token-based authentication via server-side routes to protect API keys and enable anonymous identity mapping.
